ELEVATION POLES:

**Length 2m or 3m
Material stainless steel
Outer diameter 35mm
Thread M35 1.5 two start**

Recommendations for installation

Elevation poles are threaded at the top allowing for the secure attachment of the Safe Strike unit.

Elevation poles, where required, can be extended with extension poles to make a maximum length of 5m.

When calculating the required length of pole, it is necessary to consider the radius of protection required to protect the building / site under consideration.
